How to employ restorative—not punitive—practices for positive classroom management.

Classroom management is traditionally a matter of encouraging good behavior and discouraging bad by doling out rewards and punishments. But studies show that when educators empower students to address misbehavior among themselves, positive results are longer lasting and wider reaching. In this innovative, practical guide, longtime education experts and thought leaders Dominique Smith, Douglas Fisher, and Nancy Frey provide a practical blueprint for creating a cooperative and respectful classroom climate in which students and teachers work through behavioral issues together.

Rewards and punishments may help to maintain order in the short term, but they're at best superficially effective and at worst counterproductive. This book continues to top ASCD's best-seller chart and will prepare teachers at all levels to ensure that their classrooms are welcoming, enriching, and constructive environments built on collective respect and focused on student achievement. A brain-based model to create learning that sticks.

In far too many classrooms, the emphasis is on instructional strategies that teachers employ rather than on what students should be doing or thinking about as part of their learning. What's more, students' minds are something of a mysterious "black box" for most teachers, so when learning breaks down, they're not sure what went wrong or what to do differently to help students learn.

It doesn't have to be this way.

Learning That Sticks helps teachers look inside that black box. Bryan Goodwin and his coauthors unpack the cognitive science underlying research-supported learning strategies so teachers can sequence them into experiences that challenge, inspire, and engage their students. As a result, teachers will learn to teach with more intentionality understanding. This practical guide is copublished by ASCD and McREL International.

New edition of the groundbreaking book that began the flipped classroom revolution.

In the revised edition of this landmark text, education innovators Jonathan Bergmann and Aaron Sams help teachers discover the flipped mastery model that allows students to learn at their own pace. This simple concept is easily replicable in any classroom, doesn't cost much to implement, and helps foster self-directed learning.

It started with a simple observation: Students need their teachers present to answer questions or to provide help if they get stuck on an assignment, but not to listen to a lecture or review content. From there, Bergmann and Sams began the flipped classroom. Students watched recorded lectures for homework and completed their assignments, labs, and tests in class with their teacher available. What they found was that their students demonstrated a deeper understanding of the material than ever before. The revised edition includes new material that places flipped learning in the current learning landscape, new tools and resources, and new examples from a variety of educators.

An unflinching look at the gap between proven practice and common practice in schools today.

Decades of research clearly show what works in schools, yet a huge gap persists between those instructional best practices and what is widely taught—and not taught—in classrooms today.

In *Results Now 2.0*, education thought leader Mike Schmoker expands on his best-selling book to offer a broader and deeper analysis of the entire K–12 education system and how it can improve. By focusing on the fundamental elements of curriculum, literacy, and effective instruction, Schmoker offers hope for the future. He describes schools that have successfully used evidence and strategic practice to bridge the gap, and he shows how any school can improve quickly. This book is a call for both educators and the public to demand transparency and fidelity to the most effective actions that transform schools and deliver results now.

Harness collective leadership to achieve meaningful improvement in schools.

How can administrators and teachers work together in ways that lead to significant—and sustained—improvement over time? How can schools accomplish this goal without adding to the work of overstretched educators? This practical guide answers these questions with recommendations for small, powerful shifts that educators can make to their daily practice.

In *Small Shifts, Meaningful Improvement*, education researchers and educators P. Ann Byrd, Alesha Daughtrey, Jonathan Eckert, and Lori Nazareno define collective leadership, a set of practices through which teachers and administrators work together to improve teaching, learning, and innovation. They explore the seven conditions of collective leadership and their corresponding shifts that, when effectively implemented, make a difference. These practical shifts support leadership work that will advance how administrators and teachers collaborate, learn together, generate solutions to longstanding challenges, and make those solutions stick over time.

Discover a practical leadership tool for creating & supporting a culturally diverse cadre of educators.

Multiple studies have explored the benefits of teacher diversity and strategies to *recruit* educators of color, but few focus on how to *retain* them. As professional demands on teachers intensify, many are leaving the classroom—and educators of color, already underrepresented in the field, are walking away at higher rates than their white counterparts. Research indicates the presence of educators of color benefits all students, so school leaders must act now to lessen this costly turnover.

Professor of education, professional learning designer, and qualitative researcher Andrea Terrero Gabbadon presents six principles to guide school leaders in their efforts to support and retain educators of color. Featuring voices from teachers in the field, research-based strategies and solutions, and recommendations for resources to enhance understanding and practice, this vital tool for leadership cultivates an affirming, validating, and inclusive school environment to serve a diverse population of staff and students.

Build a better data culture as the path to better results and greater equity in schools.

Students are not just statistics. They aren't simply a set of numbers or faceless dots on a proficiency scale. They are vibrant collections of experiences, thoughts, perspectives, emotions, wants, and dreams. And taken collectively, all of that information is data—and should be valued as such.

Equity in Data not only unpacks the problematic nature of current approaches to data but also helps educators demystify and democratize data. It shows how education leaders can bake equity into data work and illuminate the disparities, stories, and truths that can make schools safer and stronger—and that help students grow and thrive. To that end, the authors introduce a four-part framework to create an equitable data culture (along with a complementary set of data principles) and demonstrate how educators can rethink their approach to data in the interest of equity.

Help students not only survive trauma but to flourish with effective coping skills.

Every day, millions of students go to school weighed down by interpersonal traumas, community traumas, and the traumatic effects of historical and contemporary race-based oppression. A wide range of adverse childhood events—including physical, verbal, emotional, and sexual abuse; chronic bullying; community or domestic violence; and food and housing insecurity—can lead to a host of negative outcomes. However, when schools provide developmentally supportive responses to these challenges, post-traumatic growth becomes possible.

In *Trauma Responsive Educational Practices*, Micere Keels examines the neurobiology of trauma; presents mindfulness strategies that strengthen student self-regulation and extend professional longevity; and demonstrates how to build pedagogically caring relationships, psychologically safe discipline, and an emotionally safe classroom learning climate. She shows educators how to use trauma as a critical lens through which to plan instruction and respond to challenging situations with coregulation.

Shifts that help teachers avoid disengaging, burning out, or leaving the profession.

Traditional approaches to the practice of teaching are unsustainable. Too many educators are disengaging, burning out, and leaving the profession in response to stressors both inside and outside of schools. This high teacher turnover has a negative effect on our students.

In *Make Teaching Sustainable*, teacher, literacy specialist, and keynote speaker Paul Emerich France explores six mindset shifts that teachers can implement to improve their educational environment—while also supporting and empowering the students. Guided by recent research and interviews with practitioners in the field, France explores how mindset and practice shifts interact with themes of healing, regeneration, vulnerability, partnership, ritual, and simplicity.
